SUMMARY

Senior full stack developer and consultant with 8+ years of experience architecting, building, and optimizing data-driven applications. Takes client projects from discovery and specification through architecture, delivery, and handoff, with clear documentation and decisions recorded along the way. Builds maintainable systems spanning complex business logic, multi-market data models, real-time interfaces, and document processing with React, React Native, Node.js, Python, and AWS. Co-founder of PixelVerse Studios, a web studio delivering modern websites, SEO, and analytics for service businesses.

SKILLS

LANGUAGES AND FRAMEWORKS JavaScript, TypeScript, Python, React, React Native, Next.js, Node.js, Express, FastAPI, GraphQL, Apollo, Remix
DATA AND ARCHITECTURE PostgreSQL, MySQL, MongoDB, Knex.js, Supabase, Firebase, REST APIs, WebSockets
DOCUMENT PROCESSING AND AI OpenCV, Tesseract OCR, Anthropic Claude API, structured AI outputs
INFRASTRUCTURE AND QUALITY AWS, Docker, GitHub Actions, Jenkins, CI/CD, Jest, Playwright, Cypress, Sentry
FRONTEND AND PRACTICES Tailwind CSS, Styled Components, SCSS, Mantine, Zustand, Redux, Storybook, accessibility, system design

EXPERIENCE

Alliance Advisors | Contract, Remote

Senior Full Stack Developer / Consultant | *September 2026 – Present*

- Designing and building a system that reads scanned shareholder proxy ballots, checks each one against the client's rules, and sends unclear cases to people for review with a recorded reason.
- Built an in-house OCR pipeline (Python, OpenCV, Tesseract) that reads identifiers, signatures, and vote marks, sending uncertain readings to people instead of guessing.
- Added a targeted AI fallback (Anthropic Claude API) for only the readings the in-house reader can't decide, keeping client data in house wherever possible.
- Building the backend, database, and review screen (FastAPI, MySQL, Next.js), with a deterministic rules engine and automated tests that make every decision traceable to its source.

PixelVerse Studios | New Jersey

Co-Founder and Full Stack Engineer | *January 2024 – Present*

- Co-founded and operates a web studio serving small-to-midsize service businesses, as sole technical architect alongside a design partner.
- Builds client platforms with Next.js, TypeScript, Supabase, and Tailwind CSS, and manages technical delivery from discovery through launch.
- Created a reusable React/Vite component library distributed through private npm packages.
- Built deployment and hosting pipelines across Netlify, Fly.io, and DigitalOcean.
- Integrated Google Search Console, GA4, and Plausible into data-driven SEO systems, with metadata-driven service-area pages, blog hubs, and local landing pages.
- Delivered reported results including 40% faster page loads and 25–50% gains in organic visibility.

MEMX | New Jersey

Full-Stack Developer | *August 2023 – August 2026*

- Co-architected a shared platform supporting multiple equities markets, two options markets, and a crypto market across distinct regulatory environments.
- Engineered a shared UI platform that adapts datasets, rules, and form validations by market while retaining one codebase.
- Designed server-side business logic and PostgreSQL/Knex.js data access supporting compliance, data integrity, and operational traceability.
- Worked across purpose-built backend systems including a REST API, WebSocket server, and file-transmission service, along with their frontend administrative tools.
- Led modularization of cross-market UI components and service endpoints, reducing duplication and improving feature rollout time by 35%.
- Delivered WebSocket-based trading and administrative features through low-latency event streams.
- Oversaw CI/CD pipelines and testing frameworks supporting deployment consistency and compliance audits.

MEMX | New Jersey

Frontend Web Developer | *December 2019 – July 2023*

- Served as founding engineer for MEMX's core React application, architecting it from the ground up and maintaining it through major feature expansions.
- Established a reusable component architecture that became the foundation for subsequent UI development.
- Improved real-time market-data rendering through memoization, virtualization, and incremental updates.
- Enforced coding standards, accessibility compliance, and type safety across the growing codebase.
- Collaborated with backend teams to refine API design, improve data efficiency, and align client workflows with system-level business logic.
- Introduced Jest and Playwright automated testing, improving regression coverage and deployment confidence.

EarthCam, Inc. | New Jersey
Lead Front-End Developer | *July 2019 – December 2019*

- Led and mentored five junior front-end developers while managing planning, reviews, and delivery across concurrent applications.
- Served as the primary product, design, and engineering liaison for client and operational requirements.
- Enhanced media playback, real-time feed rendering, and UI performance for the React-based EarthCam Public Player.
- Collaborated with product and media teams to architect and launch EarthCam TV as a streaming-style interface for programmable public-camera channels.
- Designed and maintained a Storybook component library with 50+ reusable UI elements, improving feature delivery speed by over 40%.
- Migrated an internal Angular tool to React, reducing technical debt and improving performance and maintainability.

EarthCam, Inc. | New Jersey
Front-End Developer | *March 2018 – July 2019*

- Maintained and refactored a large legacy jQuery platform, improving stability, load performance, and code organization.
- Built a React Share component and integrated it into the legacy application as a standalone bundle.
- Built and maintained a React application for internal and external users viewing live and recorded construction-site and public-landmark camera feeds.
- Developed media capabilities including real-time video playback, filtered clip generation, timelapses, and high-resolution image archives.
- Implemented Sentry error tracking, improving front-end observability and production issue resolution.
- Collaborated with backend and video teams to optimize data streaming, asset retrieval, and high-traffic media experiences.

PRODUCTS AND VENTURES

Domani | Production iOS and Android Application
Co-Founder and Sole Developer | *December 2025 – Present*

- Co-founded and solely developed Domani, an evening-planning and daily-priority application launched to production on iOS and Android in May 2026.
- Built the mobile application for iOS and Android with React Native, JavaScript, Tailwind CSS, Supabase, and SQL, along with its public website.
- Delivered planning features including a top daily priority, task categories, reminders, intentional task rollover, and lifetime-access purchasing on both mobile platforms.
- Owns end-to-end development, production maintenance, and consistent incremental feature delivery across both mobile platforms.

EDUCATION

William Paterson University of New Jersey
Bachelor of Science, focus in Business Administration and Marketing | *2009 – 2013*

Rutgers University
Full Stack Web Development Bootcamp | *2017*

Completed a 24-week intensive JavaScript coding bootcamp.
